## APPLICATION FOR TRAFFIC CAMERA BROADCAST

**Place a checkmark next to the desired Thruway Authority Camera Feed(s). Please note that the direction listed is the location of the camera on the roadway and not necessarily the view of the camera.**

The camera feeds currently available are listed below. Please note that the Authority reserves the right to discontinue transmission of any camera feed at any time. The Closed-Circuit Television (CCTV) systems data that the Authority will provide pursuant to the attached Agreement is provided "as is" and "as available." The Authority does not guarantee the quality, accuracy or timeliness of the CCTV images. Further, the Authority does not guarantee that any CCTV camera feed will be uninterrupted, error or defect free, free of viruses or other harmful code, or secure, or that problems will be corrected even if the Authority is on notice of such problems.

Technical Requirements: The Authority's CCTV systems data is available as all-digital MPEG2 encoded multicast video and/or still .jpg images.

The all-digital MPEG2 encoded multicast video will need to be decoded by the receiving entity. The receiving entity also needs to be able to overlay the Authority's web address onto the Authority's traffic video whenever it is displayed. Because the images are already digitized, the transfer of the images is accomplished over a network-to-network connection. Network connections can be made at many locations along the Thruway. The number of video feeds that the receiving entity can receive is contingent upon the bandwidth of the circuit provided by the receiving entity.

Still .jpg images are accessible via the Authority's Secure FTP Server. Access to these images requires a user name and password provided by the Authority. The receiving entity also needs to provide a prominent hyperlink (with the Authority logo) that points to the Authority website on all of its web pages that display Authority still .jpg images.
